10073653	Protimax SL-503	20kg box (bulk product)
10073659	Protimax SL-503	1kg foil pack (14 X 1kg per case)

PRODUCT DESCRIPTION: Protimax consists of spray dried whole eggs containing egg based antibodies, functional proteins and other key nutritional components. Protimax eggs are obtained from strategically managed hens vaccinated with specific antigens over time.

DIRECTIONS FOR USE: As standard practice, Protimax should be mixed so that each calf receives 4 grams daily for the first three weeks of life (2 gram scoop included). Manufacturers of commercial milk replacers should add 8.8 - 17.6 lb/ton (4 - 8 kg/metric ton) to dry milk replacer to achieve 2 - 4 grams of Protimax per calf per day. Protimax is readily dispersible in milk and milk replacer. It is best pre-mixed in a smaller volume before adding to larger mixing tanks. Calves may receive larger doses of up to 10 grams of Protimax immediately after receiving colostrum to optimize protection. Protein quality of Protimax is best maintained when pelleting temperatures do not exceed 160°F.

GUARANTEED ANALYSIS: Crude Protein, min.....43.0%
Crude Fat, min.....30.0%
Ash, max.....6.0%
Moisture, max.....7.0%

INGREDIENTS: Dehydrated Egg Product

PHYSICAL PROPERTIES: Yellow, powder

STORAGE: Store in a well-closed container in a cool, dry area

EXPIRATION DATE: 18 months from date of manufacture
